- **Jan → Feb:** Rate dropped from 33.3% to 0% (-33.3 percentage points, -100% change) ✓ **Improving**
- **Feb → Mar:** Rate spiked from 0% to 50% (+50 percentage points) **Declining**
- **Mar → Apr:** Rate dropped from 50% to 0% (-50 percentage points, -100% change) ✓ **Improving**

Assessment

Current Status: Improving - The most recent month (April) shows 0% readmissions, which is a significant improvement from March's concerning 50% rate.

Caution: The pattern is highly volatile with alternating months of 0% and elevated readmission rates. The small sample size (only 1-3 visits per month) makes it difficult to establish a reliable trend. Sustained monitoring over more months with higher volumes is needed to confirm whether this improvement is genuine or simply due to low volume variability.
